About Me

I am someone who is truly interested in computing and has a deep passion for technology and everything computers and enjoys exploring different aspects of IT networks and applications technology. As a Cloud Practitioner I always try to learn about the tech trends which could benefit a business. I am really good at troubleshooting and can resolve technical problems by adapting to new tools and unfamiliar systems.

I believe I am an excellent team player who takes pride in the success of their team. I may not speak the most, but when I do I always want to add value to the task at hand. I understand and respect different opinions and can work closely with my colleagues to achieve common goals. I realised that great results are achieved when everyone collaborates and contributes their talents towards a shared goal.
